## Craftsman garage door opener wall control

Troubleshoot a Craftsman garage door opener by controlling the batteries, extending the antenna and ensuring the receiver gets power. Also, check for objects that cover or obstruct the eye or safety sensors. The troubleshooting process takes only a few minutes. Check the batteries Change the batteries in the opener to see if it works before checking anything else. Do this even if the batteries are somewhat new, as the new batteries may be corrosion or may be defective. Extend the antenna after replacing the batteries Semand the antenna, making sure to extend it completely. Try to handle the opener from another position inside the car. Check the socket So motion the receiver cable and connect another device, such as a hairdryer, to make sure the socket provides power. Check the path of the safety sensors Find the safety sensors at the bottom of the track. There's one on either side of the door. Look for items that might be eye-catching, such as toys, tools, or paper. In addition, check the eyes for dirt or anything else that could prevent the eyes from working, and clean them off. If you're tired of using a large, separate box to open your garage door, DIYer Lou Prado shows us how to mod your garage door to open with your smartphone, with only a Bluetooth headset and a \$1 transistor from RadioShack. This task is actually quite simple: you will need some welding skills, but it does not require any advanced electronics. Just grab a \$1 transistor from RadioShack, a Bluetooth headset (if you don't already have one), and a welding iron. Basically, you'll be using the headphone's audio amplifier to send a signal to your garage door opener. The mod works with a number of popular garage door openers, and even has a special application for Android (iPhone version is coming soon) to make the process a little easier. Click on the link below for more information and watch the video above to see a step-by-step guide. Of course, if you have trouble opening your door, you can always break into it from the outside. We all have those rare (or not so rare) cases where we lock ourselves out of our homes. While...
